TEMPLATE LITERALS

**@Mehdibouchachi**

# TEMPLATE LITERALS

👉 **Template literals** are an ES6 JavaScript feature.

👉 which allows us to very easily **create strings that contain some JavaScript variables or expression** inside of a string.

```javascript
const movie = getMovie(2);
const {title, director,reviews,geners} = movie

const summary = `${title}  is a movie,
 that was directed by ${director}`;

summary //Interstellar is a movie... directed by Nolan...
```

# DESTRUCTURING OBJECTS AND ARRAYS

USING JS EXPRESSON

```
1   const movie = getMovie(2);
2   const {title, director,publicationDate} = movie
3
4   const summary = `${title}  is a movie,
5    that was directed by ${director} ,
6    and published in ${publicationDate.split('-')[0]}`;
7
8   summary
9   //Interstellar is a movie... directed by Nolan...
10  // published in 2014
```

# SEE YOU SOON...
